

The Goldman Sachs Group, Inc. 2021 Annual Dodd-Frank Act Company-Run Stress Test Disclosure

June 2021

# Goldman Sachs

### **Cautionary Note on Forward-Looking Statements**

- The 2021 Dodd-Frank Act Annual Stress Test Disclosure (the Stress Test Results) presented herein contains forward-looking projections that represent estimates based on the hypothetical, severely adverse economic and market scenarios and assumptions under the Supervisory Severely Adverse scenario prescribed by the Federal Reserve Board (FRB). The Stress Test Results do not represent the firm's forecasts of actual expected gains, losses, pre-provision net revenue, net income before taxes, capital, capital actions, risk-weighted assets, or capital ratios
- The estimated results contained herein may not align with those produced by the FRB, even where the same hypothetical stress scenario is used, due to differences in methodologies and assumptions used to produce those estimates. In addition, the results contained herein may not be comparable to results of prior stress tests conducted by the firm or the FRB due to, among other factors, changes in applicable hypothetical stress scenarios, methodological changes, changes in applicable assumptions and changes in the firm's business and exposures
- For a discussion of some of the risks and important factors that could affect the firm's future business, results and financial condition, see "Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2020. You should also read the cautionary notes on forward-looking statements in our Quarterly Report on Form 10-Q for the quarter ended March 31, 2021 and Earnings Results Presentation for the quarter ended March 31, 2021
- The statements in the presentation are current only as of the date the presentation was posted to the firm's website and the firm does not undertake to update forward-looking statements to reflect the impact of subsequent events or circumstances

### **Overview & Requirements**

#### **DFAST Requirements**

- The company-run U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) Stress Tests (DFAST) are conducted annually and completed in April of each year. The Goldman Sachs Group, Inc. (we, us, or our) is currently required to conduct stress tests using a set of macroeconomic scenarios (Supervisory Baseline and Supervisory Severely Adverse) developed by the FRB
- In addition, as part of our capital plan submitted to the FRB in connection with its annual Comprehensive Capital Analysis and Review (CCAR), we are also required to assess our capital adequacy under internally developed Baseline and Severely Adverse scenarios
- We are required to calculate our 2021 DFAST in accordance with the regulations of the FRB (Capital Framework). These regulations are largely based on the Basel Committee on Banking Supervision's framework for strengthening international capital standards (Basel III) and also implement certain provisions of the Dodd-Frank Act. The capital requirements are expressed as risk-based capital and leverage ratios that compare measures of regulatory capital to risk-weighted assets (RWAs), average assets and off-balance sheet exposures
- We are required to calculate, for all quarters of the planning horizon:
  - Common Equity Tier 1 (CET1) capital, Tier 1 capital and Total capital ratios in accordance with the Standardized approach and market risk rules set out in the Capital Framework (together, the Standardized Capital Rules)
  - Tier 1 leverage ratio, using the Capital Framework definition of Tier 1 capital in the numerator and adjusted total assets (which includes adjustments for certain capital deductions) in the denominator
  - Supplementary leverage ratio (SLR), which includes the Capital Framework definition of Tier 1 capital in the numerator and a
    measure of leverage exposure consisting of total assets and certain off-balance sheet exposures in the denominator (which include
    a measure of derivatives, securities financing transactions, commitments and guarantees) less certain balance sheet deductions
- The planning horizon for the 2021 DFAST is the first quarter of 2021 through the first quarter of 2023

# Goldman Sachs

### **Overview & Requirements**

#### **Global Market Shock & Large Counterparty Default**

- Firms with significant trading activity, such as us, must include in their DFAST Supervisory Severely Adverse scenario a component that assesses potential losses associated with trading positions, private equity positions and counterparty exposures (Global Market Shock (GMS)). Additionally, firms subject to the GMS must apply the shock as of a specified point in time, which results in an instantaneous loss and a reduction in capital at the start of the planning horizon
- In addition, firms with substantial trading or processing and custodian operations, such as us, are required to incorporate a counterparty default scenario component into their Supervisory Severely Adverse stress scenario. Firms subject to the counterparty default scenario component are required to estimate and report the potential losses and related effects on capital associated with the instantaneous and unexpected default of the counterparty that would generate the largest losses across its derivatives and securities financing transactions, including securities lending and repurchase agreement activities

#### **Capital Actions**

- Results incorporate capital action assumptions as prescribed by the FRB's DFAST rules, which assume no dividends on instruments
  that qualify as CET1 capital, no redemptions or repurchases of any capital instrument that is eligible for inclusion in the numerator of a
  regulatory capital ratio, and no issuances of common stock or preferred stock
- The FRB's DFAST rules also assume payments are made on instruments that qualify as additional Tier 1 capital or Tier 2 capital equal to the stated dividend, interest, or principal due on such instrument

#### Stress Capital Buffer (SCB)

SCB is measured as the difference between the starting and lowest projected CET1 capital ratio in the Supervisory Severely Adverse
scenario, as calculated by the FRB, plus four quarters of planned common stock dividends, subject to a 2.5% floor. This disclosure does
not include detail on the SCB, which will be released by the FRB in August

### **Pandemic Response**

- The COVID-19 pandemic has created a complex operating environment, and while we are cautiously optimistic about the improving economic outlook, there remains considerable uncertainty with respect to the course of the pandemic globally, including vaccine distribution and the spread of new variants
- Our priority has been and remains the health and safety of our employees and our communities, as well as helping our clients navigate through the uncertainty
- In spite of these challenges, we exhibited strong overall performance, supported by a robust capital position and nimble risk management practices
- While responding to the stress event in real time, we also adjusted our internal stress testing process to aid our dynamic capital management by incorporating pandemic variables into our internally-developed CCAR scenario design and frequently re-forecasting our budget
- Though it has been an unprecedented year, the pillars of our strategic direction remain unchanged: we continue to strengthen existing businesses, grow durable revenues and operate more efficiently
- As we continue to monitor the course of the pandemic and as the economy recovers, we will remain focused on disciplined capital management and planning

## **Material Risks Captured**

| Risk Type           | Risk Type Explanation                                                                                                                                                                                           | Incorporation into Supervisory Scenarios                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Market<br>Risk      | Losses in the value of inventory, investments, loans and other financial assets and liabilities accounted for at fair value due to changes in market conditions                                                 | <ul> <li>In the first quarter, we apply the GMS to certain fair value positions</li> <li>Over the course of the macroeconomic scenario, we further stress positions based on prescribed changes in macroeconomic variables and asset values and estimate losses for trading incremental default risk</li> </ul>                                                                                                                                                                                                                                                                                                            |
| Credit<br>Risk      | Losses due to the default or deterioration in credit quality of a counterparty (e.g., an over-the-counter (OTC) derivatives counterparty or a borrower) or an issuer of securities or other instruments we hold | <ul> <li>In the first quarter, we apply the GMS, which includes counterparty credit losses (i.e., from credit valuation adjustments (CVA) and other counterparty credit losses). We also apply the large counterparty default scenario, which includes counterparty credit losses due to defaults on OTC derivatives and securities financing transactions</li> <li>Over the course of the macroeconomic scenario, we project CVA and other counterparty credit losses. We also incorporate credit risk to projections for changes in provisions, loan losses and defaults on our loans and lending commitments</li> </ul> |
| Operational<br>Risk | Adverse outcomes resulting from inadequate or failed internal processes, people, systems or external events                                                                                                     | <ul> <li>Losses, including litigation-related losses, are estimated based on our historical<br/>operational risk experience, relevant internal factors, including operational risk and<br/>control self-assessment results, scenario analysis and recent industry matters, and the<br/>assumed conditions of the Severely Adverse scenario</li> </ul>                                                                                                                                                                                                                                                                      |
| Liquidity<br>Risk   | Risk that we will be unable to fund ourselves or meet our liquidity needs in the event of firm-specific, broader industry or market liquidity stress events                                                     | <ul> <li>We project potential liquidity outflows (e.g., draws on unfunded commitments and secured and unsecured financing roll-offs without replacement) and the impact of these outflows on our liquidity position and balance sheet</li> <li>We also project increased funding costs</li> </ul>                                                                                                                                                                                                                                                                                                                          |

## Goldman Sachs

### **Projection Methodologies**

#### Pre-Provision Net Revenues (PPNR) - Revenues

- When projecting revenues we utilize multiple approaches including models based on regression analyses, repricing inventory due to the
  projected changes in asset values, and management's judgment. Each of the four segments below has a unique combination of
  business activities that respond differently under various macroeconomic scenarios
- We also incorporate the impact of industry performance during historical stressed periods to help guide management's judgment

| Segment                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Investment<br>Banking<br>(IB)             | Provides a broad range of investment banking services, including strategic advisory assignments with respect to mergers and acquisitions, divestitures, corporate defense activities, restructurings and spin-offs, and equity and debt underwriting of public offerings and private placements. IB also provides lending to corporate clients, including middle-market lending, relationship lending and acquisition financing, and provides transaction banking services                                                                                                                  |
| Global<br>Markets<br>(GM)                 | Facilitates client transactions and makes markets in fixed income, equity, currency and commodity products with institutional clients. GM makes markets in and clears institutional client transactions on major stock, options and futures exchanges worldwide and provides prime brokerage and other equities financing activities. GM also provides financing to clients through resale agreements, as well as through structured credit, warehouse and asset-backed lending                                                                                                             |
| Asset<br>Management<br>(AM)               | Manages assets and offers investment products across all major asset classes to a diverse set of institutional clients and a network of third-party distributors. AM makes equity investments, which include alternative investing activities related to public and private equity investments in corporate, real estate and infrastructure assets, as well as investments through consolidated investment entities, substantially all of which are engaged in real estate investment activities. AM also invests in corporate debt and provides financing for real estate and other assets |
| Consumer & Wealth<br>Management<br>(C&WM) | Provides investing and wealth advisory solutions, including financial planning and counseling, executing brokerage transactions and managing clients' assets. C&WM also provides loans, accepts deposits and provides investing services, including through its digital platforms, and issues credit cards to consumers                                                                                                                                                                                                                                                                     |

## Goldman Sachs

### **Projection Methodologies**

#### **PPNR - Operating Expenses**

- Operating expense projections include:
  - Compensation and benefits expense, which includes salaries, estimated year-end discretionary compensation, amortization of equity awards and other items, such as benefits. Discretionary compensation is significantly impacted by, among other factors, the level of net revenues, overall financial performance, prevailing labor markets, business mix, the structure of our share-based compensation programs and the external environment
  - Expenses that vary based on the overall operating environment, such as brokerage, clearing, exchange and distribution fees, which
    reflect changes in levels of business activity, and market development costs
  - Expenses that relate to our global footprint and overall headcount levels, such as depreciation and amortization, occupancy, and communication and technology costs
  - Operational risk losses, including litigation reserves (and corresponding legal fees), as well as any projected impairments of non-financial assets

#### **Provisions for Loan Losses**

- Provisions for loan losses are projected over the planning horizon using a comprehensive, model-based approach for both wholesale
  and consumer lending activities. The wholesale model estimates losses based on projections of the probability of default, loss given
  default and exposure at default, which is segmented by industry classification and region for loans and lending commitments accounted
  for at amortized cost. The consumer lending model estimates losses based on projected growth and changes in borrower credit quality
- As required by the FRB's instructions, our calculation of provisions incorporates our implementation of the Current Expected Credit Loss (CECL) standard. The FRB's calculations will not incorporate this standard or its impact on provisions until the 2022 CCAR stress testing cycle

### **Projection Methodologies**

#### **Trading & Counterparty Losses**

Trading and counterparty losses include mark-to-market losses, trading incremental default risk losses on positions held at fair value and changes in CVA and other counterparty credit losses as a result of the GMS, as well as the impact of the counterparty default scenario. Subsequent trading incremental default risk losses over the course of the macroeconomic scenario are also included. We use our existing stress testing and risk management infrastructure to calculate the impact of the GMS and to quantify the impact of the counterparty default scenario

#### **Other Losses**

 Other losses primarily include projected changes over the course of the macroeconomic scenario in the fair value of non-trading loans and lending commitments, which are held for sale or accounted for under the fair value option, as well as their associated hedges, which are not subject to the GMS pursuant to the FRB's instructions

#### **Balance Sheet**

Balance sheet projections are based on the macroeconomic environment and incorporate input from businesses on growth
assumptions, planned activity, changes to carrying values as a result of marking our inventory to market, and management's judgment
as to how we manage our balance sheet, funding and liquidity over the course of the macroeconomic scenario

#### **Capital and RWAs**

Capital projections incorporate projected net earnings, capital deductions and other changes in equity, and capital actions required by
the DFAST rules. Projected RWAs reflect the impact of the macroeconomic environment, such as changes in volatilities and credit
spreads. Additionally, projected RWAs and capital deductions are also impacted by the projected size and composition of our balance
sheet over the course of the macroeconomic scenario

### **Supervisory Scenario Overview**

- The Supervisory Severely Adverse scenario is characterized by a severe global recession accompanied by a period of heightened stress in commercial real estate and corporate debt markets
- This is a hypothetical scenario designed to assess the strength of banking organizations and their resilience to unfavorable economic conditions and does not represent a forecast of the FRB
- Further information about the Supervisory Severely Adverse scenario is available on the FRB's website <a href="http://www.federalreserve.gov">http://www.federalreserve.gov</a>

| Overview of Supervisory Severely Adverse Scenario                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                              |  |

| Other Revenue                                | _              |                                     |
| less:                                        |                |                                     |
| Provision for Loan Losses                    | 9.8            |                                     |
| Realized Losses/(Gains) on Securities        | _              |                                     |
| Trading and Counterparty Losses <sup>2</sup> | 24.0           |                                     |
| Other Loss/(Gains) <sup>3</sup>              | 2.6            |                                     |
| equals:                                      |                |                                     |
| Net Loss Before Taxes                        | (26.7)         | (2.4)                               |

- 1. PPNR includes net revenues and operating expenses (including operational risk events and other real estate owned costs)
- 2. Trading and counterparty losses include mark-to-market losses, trading incremental default risk losses on positions held at fair value and changes in CVA and other counterparty credit losses, as a result of the GMS and the impact of the counterparty default scenario. Subsequent trading incremental default risk losses over the course of the macroeconomic scenario are also included
- Other losses/(gains) primarily include projected changes over the course of the macroeconomic scenario in the fair value of non-trading loans and lending commitments, which are held for sale or accounted for under the fair value option, as well as their associated hedges, which are not subject to the GMS pursuant to the FRB's instructions

### **Summary of Results**

Table 4: Projected Loan Losses, by Type of Loan, 1Q21 - 1Q23 under the Supervisory Severely Adverse Scenario

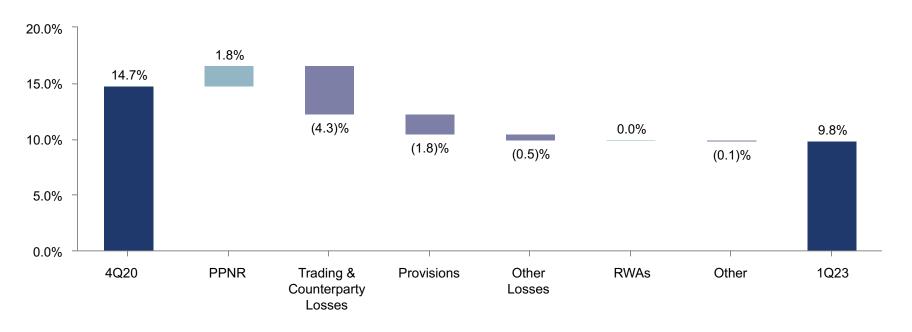

| Loan Type                         | \$ in billions | Portfolio Loss Rates % |
|-----------------------------------|----------------|------------------------|
| Loan Losses <sup>1</sup>          | 9.8            | 6.5                    |
| First Lien Mortgages, Domestic    | 0.0            | 5.2                    |
| Junior Liens and HELOCs, Domestic | _              | _                      |
| Commercial and Industrial         | 3.6            | 8.4                    |
| Commercial Real Estate, Domestic  | 0.7            | 8.8                    |
| Credit Cards                      | 1.3            | 18.1                   |
| Other Consumer                    | 0.9            | 12.1                   |
| Other Loans                       | 3.3            | 3.9                    |

<sup>1.</sup> Loan losses and the average loan balances used to calculate portfolio loss rates excludes loans and lending commitments held for sale or accounted for under the fair value option

### **Key Ratio Drivers**

Graph 1: Key Drivers of CET 1 under the Supervisory Severely Adverse Scenario<sup>1,2</sup>

- 1. PPNR, Trading & Counterparty Losses, Provisions for Loan Losses and Other Losses are on a pre-tax basis
- 2. Results assume no dividends paid on instruments that qualify as CET1 capital, no redemptions or repurchases of any capital instrument that is eligible for inclusion in the numerator of a regulatory capital ratio, no issuances of common stock or preferred stock, and include payments on instruments that qualify as additional Tier 1 capital or Tier 2 capital as prescribed by the FRB's DFAST rules
